

Physical2Digital (P2D) is an innovative software house developing market leading solutions specialising in Customs compliance and logistics software that delivers fully compliant SPS and Customs capabilities across retail, supplier and manufacturer organisations.

Market leading SPS compliance tool that enables you to be fully SPS compliant with minimal disruption to existing operations.

Unique, market disruptive customs import and export declaration tool. Includes automated P&R classification and Meursing code calculation.

Easily implemented, patented technology that allows you to track and visualise the secure movement of any product globally, enabling advance notice to border inspection.

Digitalisation of manufacturing operations processes with full reporting capability.

We offer an optimised, market tested, single window platform, integrating you and your supply base enabling both to be fully SPS and customs compliant, enabling the movement of goods from GB to EU.

- 1 SPS platform allows suppliers to collate data centrally and provide an efficient OV and Phytosanitary service
- 2 SPS pre-inspection by certifying officer prior to arrival at DC

- 6 Meursing codes calculated without the need for suppliers sharing data with external organisations
- 7 Prohibited & Restricted (P&R) capability automatically picks up 'required additional information' codes applicable to your commodity, e.g. EHCs

- 11 HMRC have stated that organisations using the P2D platform will not be at risk from a tariff perspective and can register under the UK Trader scheme with no NI establishment requirement
- 12 Proof of final destination using the Digital Track and Trace service

### Platform Capabilities

- 3 Creation of load specific SPS and customs declarations in a single window. Fully aligned with daera, defra, dafm and HMRC requirements
- 4 Pre-notification to border controls
- 5 Automated customs platform completes required declarations for GB-NI and ROI

- 8 P&R requirements for control and restricted goods including GM, plastics products
- 9 Commodity code tool allows users to search for product commodity codes
- 10 Full API gateway enabling integration into daera, defra, dafm and HMRC

- 13 Geofencing informs control post and facilitates faster border processing time
- 14 Enables pre-notification to the border inspection point and faster border processing
- 15 Single source of truth allows our customs solution to complete required declarations with one data set, ensuring accelerated and accurate turnaround
- 16 P2D system limits any impacts on current DC operations and can be deployed at supplier sites where they are the Exporter

### Features

- Collect SPS data across the supply chain, aggregated and presented in the correct formats to certifying officers to support EHC certification at the point of load.
- Automatically generate CHED Part 1 and prepare and submit customs declarations directly into HMRC's CDS system with full data alignment between the EHC, CHED and import declarations.
- Automated P&R classification and Meursing code calculation including branded goods suppliers.
- Continuous updating of the platform for defra and EU led EHC and AHR changes to ensure continued compliance to defra, daera, dafm and HMRC requirements.
- Supports full API integration between suppliers, retailers and directly into defra, daera and HMRC systems.
- Veterinary platform.
